

How are we looking after your heart this

Valentine's
Day?

King's Health Partners Cardiovascular

We are bringing together our clinical, research and educational expertise in cardiovascular disease to improve outcomes and patient experience.

We had more than **125,000** cardiovascular adult outpatient appointments in 2018.

We host the **British Heart Foundation Centre of Excellence**.

We have the **largest** vascular surgery network in England.

Improving heart care

Innovative research

We have developed a revolutionary new blood test for detecting a heart attack that could speed up diagnosis. The new test will be able to help reassure worried patients more rapidly, free up bed space and increase efficiency.

Pioneering surgery

We host the UK's most comprehensive heart valve service and were:

First in the UK to repair leaking heart valves without the need for invasive surgery.

First in the world to replace an aortic valve using a new type of prosthesis, which is more durable with less side effects.

Mind & Body

Our integrated heart failure service ensures that mental wellbeing is considered at every stage of a patient's journey.

One Team Working

We have merged services to create a 24 hour on-call rota for patients in need of acute aortic dissection.

5 tips for a healthy heart

#1 Eat a balanced diet

#3 Quit smoking and refrain from excess drinking

#4 Get checked out if you're unsure

#2

Exercise regularly

#5

Look after your emotional wellbeing
